

# A complete ERP for hydraulics businesses

EBMS brings together your business' financials, inventory, and workflows in a comprehensive system. You can easily track stock levels, reduce the need for tedious data entry, and gain deep insight into your financials. With EBMS, your team has the information and tools they need to serve your customers well.

# Robust Feature Set

Here are some of the features that make EBMS the best choice for hydraulics companies looking to streamline operations and sustainably grow.

## Custom Hose Assembly Support

Mistakes in order entry or production can put a real crimp in your custom hose assemblies. With EBMS, you can build assemblies on the fly that adjust for all the inventory used and keep pricing accurate.

## Serialized Item Management

Being able to track serialized equipment makes ongoing maintenance simpler. EBMS makes it easy to assign and trace serial numbers unique to each item, so you can view that item's history across inventory, sales, and repairs. With accurate service records for everything you work on, you can build long lasting relationships with your customers.

## Purchasing and Receiving Tools

Your operations depend on purchasing and receiving parts efficiently. EBMS equips you to order the right amount of parts at the right time to ensure that you have what you need when you need it - without overstocking or tying up critical cashflows.

## Flexible Price Level Management

With EBMS you can easily adjust your pricing for different customers, offer volume discounts, or set up a promotion with start and end dates. Instead of half-remembered deals and keeping track of discounts on sticky notes, EBMS handles pricing changes for you, without overcomplicating your sales process or compromising your profitability.

## Stock and Special Order Management

Managing inventory stock and special orders doesn't have to be a hassle. EBMS gives you complete visibility into inventory so you can allocate stock efficiently, while providing tools to create special orders for items not in stock. Always have the right parts when you need them - no overstocking, no understocking.

## Integrated Credit Card Processing

Managing payments across multiple channels can be a bottleneck. EBMS allows you to integrate payment processing directly into the system, so you can securely process payments at the point-of-sale or online, eliminate manual errors, and speed up cash flow. EBMS automatically updates payment records and is compliant with security standards.

## Mobile Work Order Applications

Does your service team reliably track their work? Make it easier for them to document their jobs with EBMS' mobile work order app. It gives your techs the tools to log parts, labor, and notes directly from their phone or tablet. You'll know every job is properly documented with real-time updates so you can keep your customers informed and bill them accurately.

## Timekeeping and Payroll

You need to track your employees' time so you can know how to plan and bill jobs, but manual entry is time-consuming and prone to mistakes. EBMS includes time-keeping tools that allow employees to clock in and out digitally, with their hours automatically linked to jobs or departments. Your payroll team can use this data to calculate wages, taxes, and deductions, ensuring employees are paid correctly.
